

PILLAR 10

CASE STUDY CLOSE

“Don't wait. The time will never be just right.”

— *NAPOLEON HILL*

Show them the no-brainer offer.

CASE STUDY CLOSE

Pillar 10 of 12 • Presentation

THE GOAL

By the end of this pillar, the customer should think: “holy moly — the monthly payment is actually less than what we’re currently paying on power. There’s genuinely no reason not to do this.” This is the close. Everything from Pillars 1–9 has been a build to this moment. The case study mechanism gives you a structural reason to drop a meaningful discount, the battery math shows the system actually covers their usage, and the finance walkthrough lands the monthly payment as lower than their current bill. The honest close hands the deal to them.

“HOLY MOLY — THE MONTHLY PAYMENT IS ACTUALLY LESS THAN WHAT WE’RE CURRENTLY PAYING ON POWER. THERE’S GENUINELY NO REASON NOT TO DO THIS.”

WHY THIS PILLAR MATTERS

- **This is THE close.** Pillar 10 is the longest and by far the most important pillar in the course. Every other pillar is a build — this is the cash-in.
- **The case study mechanism unlocks the offer.** Without a structural reason for the discount, you’re negotiating against yourself. The case study gives the customer something to qualify for — which makes the discount feel earned, not begged for.
- **The aha reveal flips the entire deal.** Solar-only at end of Pillar 9 was “better than nothing but still out of pocket.” Pillar 10 closes with the customer seeing monthly payment LESS than their current bill — the rep delivered on the “we want to make it so it costs you nothing” promise from Pillar 9.
- **The honest close hands them the deal.** Instead of asking “are you ready to move forward”, you ask “you guys happy with that?” after juxtaposing the math so clearly that saying no would feel like denying reality. This is the inverse close that doesn’t feel like a close.

TONALITY (CRITICAL)

SLOW, CLEAR, HONEST — HONESTY AS METHOD

This pillar is the longest and most complex in the course. The tonality that makes it work is **honesty as method**. The rep isn’t selling — they’re walking the customer carefully through a real opportunity, with constant check-ins to make sure they understand. The slowness is the proof. The honest moments (“I’m being serious here, like I’m actually being honest”, “that would be me giving you false information”) are what makes the whole thing land as legitimate.

— **Slow down deliberately.** The math is doing the work. Walking it slowly, with check-ins, makes the customer feel like a partner in the calculation rather than a target of one.

— **Honesty as a sales method.** The most powerful moments in this pillar are the explicit honesty beats — admitting bird's eye view appeal matters, admitting the rep can't quote 100% battery coverage because that would be false information, explicitly inviting the customer to find a reason it doesn't work. Honesty here isn't just ethics — it's the highest-converting tonality.

— **Constant check-ins.** "Does that make sense?", "Let me know if you're not following", "I'm going step by step". The rep should be checking in every 60–90 seconds throughout this pillar. Each yes is a micro-commitment.

— **Confident but not pushy.** The math is overwhelming in the rep's favour by this point. Don't hype it — let the numbers speak. The calmer the rep stays, the more legitimate the close feels.

Scripting note

This pillar has 7 sections: (1) Pre-frame anchor, (2) Qualifying criteria walk, (3) The reveal + manager call setup, (4) The 2–3 minute mute + return, (5) Battery hardware credibility build, (6) Battery sizing math + aha pricing reveal, (7) Value stack + honest close. The Australian battery rebate mechanism is used as the worked example throughout. The structural principles transfer to any case study mechanism — the qualifying criteria, the math, and the offer specifics get adapted to your business and market. The full finance company walkthrough (which finance company you use, why, the loan terms) is covered in a separate document.

A NOTE ON THE FRAMEWORK

This pillar scripts out the case study mechanism specifically — but the framework works for ANY offer you want to deliver in front of a customer. The case study is referenced heavily throughout this SOP because it's the highest-converting application we've built. But the structural beats (pre-frame anchor → qualifying criteria → honest admission → reveal → third-party authority device → micro-commitment → hardware credibility build → sizing math → aha reveal → value stack → transparency admission → baffles-me pre-frame → honest close → closing structure) transfer to any offer you want to position as conditional, scarce, and earned.

This SOP scripts out one specific case study mechanism — the Australian battery rebate version — because it's the most effective version we've delivered. Adapt the qualifying criteria, the discount math, and the offer specifics to whatever case study mechanism makes sense for your business and market. The key structural elements that DO transfer regardless of market or offer type:

- A pre-frame anchor that connects to a hint planted earlier in the appointment
- Qualifying criteria the customer's property has to meet
- An honest admission about why their property qualifies (avoids feeling generic)
- A reveal of what they get (battery free, big discount, exclusive pricing, etc.)
- A manager call (or equivalent third-party authority device) tied to a real condition
- A photo / marketing micro-commitment

- Privacy reassurance
- Battery / system hardware credibility build (cash in “why our products” from earlier)
- Sizing math + aha pricing reveal (< current bill)
- Long-horizon value stack (savings juxtaposition, ROI mention, summer profit reveal, blackout callback)
- Honest disclaimer (Savings Guarantee protection)
- Total investment recap + transparency admission (we’re not the cheapest, you’re trading off X for guarantees)
- Baffles-me pre-frame against shopping around
- Customer-side aha reframe
- Any-other-questions check-in
- Inverse honest close (“is there any way this doesn’t benefit you”)
- Sidestep recovery (if they don’t answer the close question directly)
- Casual close + closing structure (panel reservation + order form + finance/cash branch + final yes)

TRANSITION FROM PILLAR 9

Pillar 9 closed with the customer saying yes to: “Do you want to jump into the battery side of things and see how it changes everything?” The solar-only savings breakdown is still on screen. The customer is leaning in — they’re primed for the “something I might be able to do with the battery” moment that was hinted at back in Pillar 9 Beat 2.

[Pillar 10 opens immediately on the customer’s yes — no need to switch tabs or move to a new screen yet. The solar-only breakdown stays as the visual anchor. The rep starts with the pre-frame anchor (Section 1).]

SECTION 1: THE PRE-FRAME ANCHOR (FULLY SCRIPTED)

[This is the connection back to Pillar 9. The customer recognises this is the “something with the battery” the rep hinted at — which makes the case study reveal land as a fulfilled promise rather than a sales gimmick.]

The Opening Connection

Open with explicit reference back to the Pillar 9 hint. The customer’s memory of that hint is what makes the case study feel earned.

“And this is sort of what I’ve been alluding to roughly, guys, because... before I go any further, I do want to bring something up in line with the recent government funding for batteries.”

[Tonality: calm + slight intrigue. Said like you’re finally getting to the thing you’ve been hinting at — because you are. The “sort of what I’ve been alluding to” phrasing is the explicit callback.]

The Why

Frame the reason the company is doing case studies. Critical framing: the marketing team has ALREADY flagged this property — the rep isn't making the call to pursue a case study right now, they're relaying something that was told to them. This positions the case study as a real, ongoing company initiative the rep is bringing the customer into — not a discount the rep just thought up to close the deal.

"The reason I'm bringing this up is because we're currently in the process of marketing batteries in line with the government rebate. And our marketing team actually actively flags properties that qualify for a case study — which is hence why I've been telling you guys there's something I might be able to do regarding the battery. It was mentioned to me earlier that your property is one of those."

[Tonality: matter-of-fact. Said like the rep is relaying real information from the marketing team — not pitching a case study. The phrasing "our marketing team actively flags" positions the system as ongoing and existing, not invented for this appointment.]

[Critical: avoid any phrasing that suggests the REP is making the call to pursue a case study. The rep is relaying a flag that already exists in the system. This makes the case study feel like a real company process the customer is being invited into, rather than a discount the rep is improvising. The "it was mentioned to me earlier" phrasing locks this in — the rep is repeating something they were told, not making it up on the spot.]

[This phrasing also creates a clean callback to the Pillar 9 Solar-Only Pre-Frame ("there's something I might be able to do with the battery side of things"). The customer recognises this as the thing the rep hinted at, and now hears the structural reason the rep was even able to hint at it — because the marketing team had flagged the property before the appointment.]

[Localisation: substitute the relevant funding/rebate context for your market. The structural elements (marketing team flag + property qualified before appointment + rep relaying not deciding) transfer regardless of what the underlying offer is.]

SECTION 2: THE QUALIFYING CRITERIA WALK

[Walk the criteria the property has to meet. The customer's property should obviously meet them — you've already mentally pre-qualified them by this point in the appointment. The criteria walk is what makes the customer feel selected, not generic. Adapt the criteria to whatever genuinely makes a property a good case study candidate.]

Beat 1: Walk the criteria (dot points)

Adapt these to the customer's property. The criteria should be things THEIR property meets. For different homes, you highlight different qualifying features. The point is to make the customer feel selected based on real attributes.

- "The property has to have a minimum usage bar — yours obviously exceeds that, you use quite a lot"
- "They have to have a north-facing roof" (or whatever orientation matters in your hemisphere)
- "Their property has to be flagged from an aerial view as approved"
- Adapt other criteria based on the home: pool, double-storey, large roof area, nice frontage, modern build, etc.

[Localisation note: these criteria are framing tools that need to land as plausible. For different properties, emphasise different things. Older home? “We need to show solar works on heritage properties.” Cookie-cutter suburban? “We need typical Australian homes for the marketing.” The criteria adapt — the structural function (qualifying the customer) doesn’t.]

[If any of the criteria don’t fit the customer’s property, drop them. Don’t force criteria that obviously don’t apply — that breaks credibility instantly.]

Beat 2: An honest admission (adapt to the property)

The rep needs to do an honest admission here — but it can’t be scripted, because it depends entirely on what the house actually is. The structural job of this beat is to make the qualifying criteria feel believable by trusting the customer with one slightly cynical truth. Whatever you say, it has to be real for THEIR property.

- If they have a photogenic home (pool, modern build, nice greenery): admit aerial appeal matters — their property fits that brief
- If they have a large roof: admit you’re looking for big-roof installs to show what’s possible at scale
- If they’re an older home: admit you want to show solar works on heritage properties — lots of older home owners assume it doesn’t fit
- If they’re a typical suburban build: admit you want representative homes for marketing — not just photogenic ones, real Australian homes
- If they have a unique feature (acreage, double-storey, anything notable): admit that’s a draw for the case study
- If they have a strong north-facing roof (or south-facing in the northern hemisphere): admit you target good orientation for production data — their roof gives you the benchmark numbers
- If they have an east-west split roof: admit east-west splits are great for showing battery performance because production stretches across the day — ideal for a battery case study specifically

[Tonality: matter-of-fact + slight self-aware honesty. The framing that does the work is admitting one slightly cynical truth that’s genuinely true for their home. The customer should feel like the rep is trusting them with how the company actually thinks about case study selection — which makes everything else feel honest.]

[This beat cannot be scripted word-for-word because it’s entirely property-dependent. The rep should observe the home (Google Maps satellite view, photos in the bill submission, or what’s visible if it’s a video appointment) and pick the most honest admission that fits. If you can’t see anything genuinely notable about the property, skip this beat — it’s better to drop it than to force a fake-feeling admission.]

SECTION 3: THE REVEAL + MANAGER CALL SETUP

[This is the offer reveal followed immediately by the manager call setup. The two are deliberately tied together — the reveal lands as “potentially” available, then the manager call is what actually unlocks it. The customer never gets the offer without saying yes to the photos first.]

Beat 1: The offer reveal (fully scripted)

Drop the offer. Use the “potentially” framing — not committed yet, conditional on manager approval and the photo agreement.

“Now, what this means for you guys though — we potentially will be able to provide a battery at no cost.”

[Tonality: matter-of-fact + slight weight. Said like a fact about a possibility, not a sales pitch. Don't hype the line — let it land naturally.]

[Adaptation note for other markets: if your discount mechanism doesn't literally make the battery free, soften to “a discount that essentially covers the cost of the battery” or similar. Don't overstate — you'll have to walk back later.]

Beat 2: The manager call setup (fully scripted)

Frame the manager call as the rep needing help — not the rep controlling the decision. This positions the rep as on the customer's side — trying to get them something good, not trying to close them.

“I would actually need to just quickly buzz my manager and get approval on it — I'm not 100% sure on a couple of the specifics, so I'd need his clarification. But the only condition on your end is you would need to give us approval to take a few photos, use your home as a case study. And of course, if you were to allow us, there would be something in it for you guys.”

[Tonality: casual + slightly humble. The “I'm not 100% sure” framing is critical — it tells the customer the rep doesn't hold all the cards, which makes the manager call feel real. The rep is asking for the manager's help, not running theatre.]

Beat 3: The photo micro-commitment (fully scripted)

Get the small yes before the manager call. Once they say yes to the photos, the manager call is just the formality. Two structural details that make this beat land as real:

— **Specify the drone** — saying “fly a drone up” makes it concrete. Without that detail, the customer thinks “why would they need permission for a Google Maps screenshot?” and the case study feels suspicious

— **Include the battery photo** — if you only ask about a bird's eye view, it reads as “they could just pull this off Google Maps.” Including the battery photo grounds the case study in something that actually requires their property

“But just before I go any further — let's say you were to go solar, is it all good if we fly the drone up, grab a quick bird's eye pic, and I think they also take one of the battery? I'll double-check that for you guys, but yeah — is that all good?”

[Tonality: casual + slight curiosity. Asked like a small ask, because it is. The “I'll double-check that for you guys” is the humility tag — the rep doesn't know every spec of the photo brief, which makes the request feel real rather than rehearsed.]

[Customers almost universally say yes — if they don't, you're not getting the sale anyway, so don't consider it a real failure mode.]

[Why the drone detail matters: a drone is concrete, visible, requires consent. A “photo” could be anything — including something they'd assume the company already has via Google Maps. The drone is what makes the consent feel necessary.]

[Why the battery photo matters: a bird's eye view alone could theoretically be pulled from Maps. A photo of the battery (which doesn't exist yet) requires the install to actually happen and the customer to allow access. That makes the case study feel like a real marketing exercise, not a discount disguise.]

Beat 4: Privacy reassurance (pre-handle)

Pre-handle the privacy concern before they raise it. The NDA framing is doing real work — it makes the photos feel managed, not exposed.

“And don’t worry — we definitely keep your property details completely private. You know how it is, it’s all under an NDA, completely private. If you saw 100 photos of batteries and solar on our website, potentially yours would be one of them in that gallery — no affiliation to your address or anything like that.”

[Tonality: calm reassurance. The “you know how it is” phrasing makes it feel standard practice rather than a special privacy measure.]

SECTION 4: THE MANAGER CALL (2-MINUTE MUTE)

[This is the structural break in the appointment. The rep takes 2–4 minutes to “buzz the manager”, the customer chats among themselves, and the rep returns with good news. The pause is doing real work — it gives the customer time to emotionally commit privately, and it makes the manager call feel real.]

WHY THIS BEAT EXISTS: THE MANAGER CALL GIVES THE CUSTOMER A REASON TO ACT NOW. THE 2–3 MINUTE PAUSE + THE STRUCTURAL BREAK + THE “MANAGER APPROVED” REVEAL CREATES THE MOMENT OF DECISION. WITHOUT IT, THE OFFER FEELS LIKE SOMETHING THEY CAN THINK ABOUT LATER. WITH IT, THE OFFER FEELS CONDITIONAL ON THIS APPOINTMENT. IT MUST LAND AS GENUINE TO WORK.

Zoom vs in-person: different execution

The physical execution of this beat changes based on appointment format. Both approaches work — but you can’t use the Zoom version in person, or the in-person version on Zoom. Pick the one that matches your context.

— **Zoom appointment:** flick your video and microphone off for the duration of the call. Frame the off-camera move as privacy for THEM, not for you (see Beat 1 below).

— **In-person appointment:** physically get up, excuse yourself, and step outside the room or into another area to make the call. The physical movement is what makes it land as genuine. Sitting at the table on a phone call kills the illusion.

[In-person reps: take your phone with you and actually fake-dial. The customer needs to see you treat this as a real call — including the physical separation from the conversation. If they can hear you talking to no one or see you scrolling on your phone, the whole pillar collapses.]

Beat 1: The mute setup (fully scripted, Zoom version)

Tell the customers to mute THEMSELVES. Frame it as privacy for THEM — the rep doesn’t want to overhear their private conversation. This is the structural detail that makes the mute land as

considerate rather than evasive.

“Awesome — that’s good news. Okay, so let me just quickly buzz my manager now. Guys, just make sure you flick your video and microphone off for a second so I don’t hear anything you’re saying privately between each other. I don’t want to intrude on your personal space or anything like that. But yeah — one quick sec guys, alright? I’ll flick myself on mute and buzz now.”

[Tonality: warm + considerate. The “so I don’t hear anything you’re saying privately” framing is the alliance signal — the rep is asking the customers to take privacy themselves, while clearly stepping away to buzz the manager. This makes the customers feel taken care of AND gives them genuine permission to talk privately.]

[In-person version: “Awesome — that’s good news. Let me just quickly step outside and buzz my manager — one quick sec.” Then physically leave the room. The privacy framing isn’t needed in person because your physical absence already gives them privacy.]

Beat 2: The pause

- Camera and mic off (Zoom) OR physically out of the room (in person)
- Wait 2–3 minutes max. Don’t come back too soon — that breaks the illusion. Don’t go beyond 3 minutes — the customer disengages.
- Use the time to actually finalise the math you’re about to walk — battery sizing, discount math, finance figures. The pause IS prep time.

[Some reps use this time to actually set up the discount in the calculator, prepare the battery hardware visuals, and double-check the savings figures. The pause has real operational value — not just theatrical.]

Beat 3: The return (fully scripted)

Return with warmth and good news. Lead with the approval, then the qualifying logic. The customer hearing “you meet the criteria” right after “good news” lands as a delivered favour.

“Hey guys, are you still there? Sorry that took a bit longer than expected, my manager was just taking a look at your property. But I’ve got some good news for you guys — my manager approved it. You’ve been flagged, [property-specific qualifying reason], so luckily you do meet the criteria.”

[Tonality: warm + confident. Said like you’re delivering good news to a friend — which is the frame. The slight “sorry that took a bit longer, my manager was taking a look at your property” humanises the call (real conversations take time, real managers take a moment).]

[Property-specific qualifying reason: this CANNOT be scripted because it depends on what the customer actually has. Adapt it to whatever made them qualify in Section 2:]

- High usage household: “your usage is quite high”
- Large roof: “you’ve got the roof space we were looking for”
- Photogenic property: “your property looks great from the aerial view”
- Older home: “your property fits what we were looking for in heritage installs”
- Higher-end suburb: “your area is one we’ve been wanting to expand into”
- If multiple things qualify, combine: “your usage is high and your roof works perfectly”

[Critical: whatever you say in this beat must match what you said in Section 2 (Qualifying Criteria Walk). If you said in Section 2 their property qualifies because of the large roof, the manager call return better mention the roof — not the usage. Consistency is what makes the manager call land as real.]

Beat 4: The conditions walk-through

After the good news, walk the conditions cleanly. Specific numbers — vague scarcity feels manufactured.

— “There are a couple of quick conditions I want to run by you, just so you’re aware. The company has allocated [X]kW of total battery storage for this marketing initiative. They’re looking for properties with large roofs, high bills, big systems”

— “We’ve got [X] battery modules left in our warehouse — that’s enough for your property, so we actually do have enough to provide it”

— “Only condition for you: one photo from your bird’s eye view, and one of the battery”

— Get verbal confirmation: “Do you guys have any issue with that?”

[Tonality: matter-of-fact. Said like you’re reading off a brief from the manager. The specific numbers (X kW allocated, X modules left) make the scarcity feel real — vague scarcity reads as manufactured.]

[Note on phrasing: say “that’s enough for your property” — not “more than enough.” “More than enough” sounds like there’s wiggle room, which weakens the scarcity. “Enough” lands as exactly what’s needed and no more.]

[Note on the question: ask “do you guys have any issue with that?” — not “I assume you guys have any issue with that.” The “I assume” framing telegraphs the expected answer; asking it directly lets them say yes naturally.]

SECTION 5: BATTERY HARDWARE CREDIBILITY BUILD

[Now show them the battery itself. This is where you cash in on the “Why Our Products” (Pillar 5) credibility and make the customer feel like they’re getting genuinely premium hardware. The customer agreed to the photos — you’re rewarding them by showing them what they’re getting.]

Beat 1: Open the battery visual

Pivot to the battery hardware page or PDF.

“Okay, let me show you what battery we’ll be giving you then. So this is the battery we use — it is the [battery model name].”

[Tonality: confident + slight build. Said like you’re about to show them something cool — because you are.]

Beat 2: Sell the battery (adapt to your hardware)

This is a sell moment — lean into it. Walk through the battery’s strongest credibility points. Hit them with high-impact stuff — the kind of thing that makes the customer think “this isn’t just a generic battery.” The structural elements that make a battery sell land:

— **Real-world commercial credibility** — if your battery is installed somewhere notable (a commercial site, a council building, an institutional project), that’s your single strongest hook. “The exact battery we install on [credible site]” lands harder than any spec sheet

— **Build quality / construction story** — if it’s modular, hand-built, military-grade, or has any non-mass-produced angle, lean into it

— **Durability ratings** — weather protection ratings (IP66, etc.), anti-corrosion ratings, temperature tolerance. Concrete numbers beat vague durability claims

— **Cycle life vs warranty alignment** — if cycle life exceeds typical warranty period, that's a structural credibility point. "Rated for X years of daily cycling, with our 25-year warranty"

— **Blackout protection** — if the battery has automatic switchover during grid outages, mention it. Quick light question first: "by the way, do you guys get blackouts much in your area?" If yes, lean in. If no, position as "just in case"

— **App / monitoring** — brief mention. The customer wants to see their savings in real time, app makes that possible

— **Visual / video proof** — if you have durability footage (fire tests, drop tests, weather tests), show it briefly

[Tonality: confident + slight enthusiasm. The commercial-grade anchor is the strongest single hook because it's real-world credibility, not marketing copy. Build the rest of the sell around that anchor — don't just list specs.]

[Don't list every point for every customer. Pick the 3–5 that land hardest for them based on their situation. A coastal customer cares about anti-corrosion ratings. An inland customer doesn't. Tailor.]

SECTION 6: BATTERY SIZING + THE AHA PRICING REVEAL

[This is THE structural moment of the pillar. The flow: drop the free battery offer first, plug it into the calculator and show the math LIVE, reveal that the free battery alone doesn't fully cover daily usage, honestly advise an upgrade to fully cover them, plug the upgrade in, walk the additional pricing, then the aha reveal. SLOW DOWN. The math does the work — rushing it kills the moment.]

CRITICAL: THIS IS THE MOST IMPORTANT SECTION IN THE ENTIRE COURSE. THERE ARE A LOT OF VARIABLES HERE — BATTERY SIZING, DISCOUNT MATH, PRICING REVEAL, MONTHLY PAYMENT COMPARISON. THE WAY IT'S EXECUTED LIVE WITH A CUSTOMER MATTERS MORE THAN WHAT'S SCRIPTED ON THIS PAGE. WATCH THE VIDEO WALKTHROUGH OF THIS SECTION AND COPY THE EXECUTION EXACTLY. READING THE SOP ALONE WILL NOT GIVE YOU THE TONALITY, PACING, OR RAPID-FIRE DELIVERY THAT MAKES THE AHA REVEAL LAND.

Beat 1: The free battery offer (fully scripted)

Open with the free offer directly. No rebate cap framing first — just drop what they get free and exactly what's included. The completeness of the inclusion list is what makes it feel real.

"Okay now guys, what we can give you free is a [X]kWh battery at no cost. And I'm being serious here, guys — I'm talking installation, warranty, parts, literally everything. As long as we do it under the case study."

[Tonality: confident + matter-of-fact. The "I'm being serious here, guys" line is critical — it's the honesty beat that makes the offer feel real rather than like a bait-and-switch. The "literally everything" phrase is what closes the door on hidden costs.]

[Localisation note: this is highly AU-specific. Adapt the free portion size and the inclusion list to whatever your discount mechanism actually is. The structural function is the same: define EXACTLY what they get free with no caveats.]

Beat 2: Plug the free battery into the calculator (fully scripted)

Walk back to the calculator and add the free battery to the math LIVE. The customer watches their self-use figure update. The honesty beat about “we can never quote 100%” lands here as the structural protection for the Savings Guarantee.

“Now if we jump back to the calculator — remember we had your day usage at [X] kWh out of your [Y] kWh daily total. Now we’re going to add the battery on top of that.”

“We can never quote 100% battery coverage because that would be false — it’d be me giving you false information. On average across the year, you’ll use about 80% of your battery capacity. So 80% of [free battery size] is [X] kWh. If we add that to your current day self-use of [Y] kWh, that brings you to [Z] kWh of self-use total.”

[Tonality: confident + clear. Walk it slowly. The “we can never quote 100% because that would be false” line is critical — it’s the honesty beat that makes everything else feel legitimate AND structurally protects the Savings Guarantee.]

Beat 3: Check-in on the free battery math

Quick check-in before moving on. Make sure they’re following.

“Does that make sense, guys, what we just did?”

[Tonality: genuine + casual. Real check-in, not rhetorical. Wait for actual confirmation. If they’re not following, walk the math again slower.]

Beat 4: Reveal the gap

Point out honestly that the free battery alone doesn’t fully cover their daily usage. This is the transparency move that sets up the upgrade recommendation. The customer sees you’re not pretending the free option is perfect.

— Point at the calculator: “you can see we’re still not at your full daily usage”

— Be specific about the gap: “you’re at [Z]kWh self-use, but your daily usage is [Y]kWh. So we’re still short by [Y-Z]kWh per day”

— Frame what the gap means: “during those night hours, you’d still be pulling some power from the grid”

[Tonality: matter-of-fact + slight honesty. Said like you’re showing them an issue, not selling them on a problem. The transparency is what makes the upgrade recommendation feel honest rather than upsell-y.]

Beat 5: Honestly advise the upgrade (fully scripted)

Recommend the upgrade with the future-proofing frame. “You only get one shot at the rebate” is the structural anchor for going to the rebate cap size. The advice is genuinely in the customer’s interest, which is what makes it land.

“Here’s what I’d recommend, guys — considering you only get one shot at doing the rebate, we want to be future-proof and make sure we protect you guys year-round. So I’d recommend going to a [upgrade size]kWh battery instead. Let me show you what that looks like.”

[Tonality: advisory + genuine. Said like a friend giving honest advice. The “you only get one shot at the rebate” line is the future-proofing anchor — it’s why going bigger now genuinely matters for them.]

Beat 6: Plug the upgrade in + show full coverage

Plug the upgrade size into the calculator. The customer watches their self-use update again — this time it covers (or exceeds) their daily usage.

- Plug the upgrade size into the calculator
- Walk the math: “80% of [upgrade size] is [X] kWh, plus your day self-use of [Y] kWh, brings you to [Z] kWh total”
- Compare to their daily usage: “your daily usage is [Y] kWh — so now we’re actually exceeding it. You’re fully covered, day and night”
- Optional check-in: “does that make sense, what we’ve just done?”

[Tonality: confident + clear. The shift from “short by [X] kWh” to “fully covered” is the visual proof. Let it land.]

Beat 7: Show the additional cost for the upgrade

Now show the cost of the upgrade. Walk the math step by step — full RRP → free portion → case study rate on remainder → final balance. Then step back and show the customer the TOTAL discount they’re getting — the scale of it lands harder when summarised.

“A [upgrade size]kWh battery is \$[full RRP]. The first \$[free portion] is completely free as part of the case study. That leaves \$[remainder]. That remainder is at the case study rate — [X]% off, so the additional cost for the upgrade comes to \$[final balance].”

[Tonality: confident + clear. Walk each math step explicitly. Pause briefly after each number to let it land.]

Then surface the total discount and plant light urgency:

“So in total, that’s a \$[total discount] discount off the system. Not bad. Hey — if you came back a couple months from now, I don’t know if I could promise the same. If you want to test that, give it a go — come back in a couple months and see what happens.”

[Tonality: matter-of-fact + a slight chuckle at the end on the “test it in a couple months” line. Said like a friend tipping them off, not a rep selling urgency. The “not bad” understatement is doing real work — it lets the discount figure speak for itself instead of overselling it.]

[Critical check-in: “Does this all sort of make sense, what I’m explaining right now? I’m going step by step.” Wait for actual confirmation. If they’re unclear, slow down even more and re-walk the math.]

Beat 8: The aha pricing reveal (fully scripted)

This is THE moment. Scroll back up to the payments line on the calculator. Now hit them with all the wins one after another — bang, bang, bang. NOT in a hyped “wow far out guys” way — that kills it. Calm, confident, matter-of-fact, just stating each win as it lands on screen. The pacing is the energy.

Walk them through it, line by line:

“Wow, now look at this. You’re literally in the positive your first year. You don’t pay one cent out of pocket for this system at all.”

“If you look here, this is how much it costs per month. And remember — wait, how much did you spend on your last bill?”

[This is a critical interactive moment. PULL THEIR BILL UP on screen and show them the figure live. Don't just verbally re-anchor — visual proof. The act of going back to the bill and showing it again is what makes the comparison feel real instead of rep-stated. Pause briefly while you find the bill — the small live-check moment IS the proof.]

“Yeah, look — it was \$[X] per month. So now you're paying less.”

“And remember, this is a consistent figure. It doesn't go up every year like power does. Power's going up next year, and the year after, and the year after that. This stays the same. That means you can budget this really easily — you can literally say, hey, I know I'm putting \$[X] away per week, or \$[X] per fortnight for electricity, and that's it. You know exactly what's going where. It's not going to randomly spike and bite you like the bills do.”

“And as well, this isn't locked in at all. So if at any point you decide you want to pay it up, no stress at all — no early exit fees, no penalties, nothing like that. If you get a bit of extra cash, get a raise at work, decide you want to sell, anything like that — no stress, no fees, nothing.”

Bring the guarantees and warranties slide back up on screen, then deliver the final line:

“And of course, this is all backed by our guarantees and warranties — so there's absolutely no risk here at all. Just to make that clear.”

[Tonality: confident + matter-of-fact. NOT hyped. Each line lands as a calm fact, not as a sales reveal. The pacing is what creates the impact — rapid-fire delivery makes each win compound on the previous one. Hying it (“wow far out guys, look at this!”) actively reduces the impact.]

[The opening “wow” in the first line is acceptable because it's registering genuine surprise at the math — not pumping it up. Said softly, almost to yourself. Different energy from the salesy hype version.]

[Critical: each win is delivered as “here's another fact you're seeing on screen” — the rep is just narrating what the math shows. The customer feels like they're discovering it themselves, not being sold to.]

[Why pulling up the bill matters: re-stating the figure verbally is fine, but pulling the actual bill back on screen forces the customer to SEE the comparison rather than just hear it. Visual proof beats verbal claim every time.]

[Why the consistent-figure + budgeting line matters: the “doesn't go up every year like power does” reframe is one of the strongest single arguments in the entire pillar. Power going up is the customer's lived experience. Solar staying flat is the contrast that makes the deal land long-term. The “that means you can budget this easily” tag adds the predictability angle — a different kind of value than savings. Some customers care more about “I know exactly what I'll pay” than the absolute saving figure.]

[Why the early-exit examples matter: “get a raise, decide to sell” turns an abstract feature (no early exit fees) into concrete life scenarios. The customer can mentally place themselves in those situations — which makes the no-fee guarantee feel personal and relevant rather than generic.]

[Why bringing the guarantees slide back on screen matters: this is a visual reinforcement of the warranty section from earlier. The customer is at peak financial-decision mode by Beat 8 — their brain is processing money, payments, terms. Bringing the guarantees back up VISUALLY at this exact moment shifts their mental frame from “evaluating risk” to “evaluating opportunity.” Don't skip the visual cue — verbally mentioning the guarantees without showing them lands much weaker.]

Beat 9: The test close (fully scripted)

Loop back with a verbal test close. This is the explicit check that the math registered. Frame it as a deliberate double-check because of how much was just covered — not as a closing technique. Don't

move on without verbal confirmation.

“Okay guys, I just want to double check, because we’ve gone through a lot just then. Is it clear all you would pay per month is \$[monthly payment]? That’s it.”

[Tonality: genuine + casual. The “we’ve gone through a lot just then” line is doing real work — it acknowledges the volume of math without dismissing it, and frames the double-check as care for THEIR understanding rather than a closing move. Wait for actual yes / no / maybe.]

[Most customers say “yeah, makes sense” or some version of confirmation. If they say maybe or hesitate, address whatever’s unclear before moving on.]

[Don’t skip this beat. The whole pillar has been a build to this moment — the test close is what locks the math into the customer’s mental commitment before the bill-changing pre-handle and the final close. Skipping it leaves the math feeling fresh / unsettled, which makes the next steps fragile.]

SECTION 7: VALUE STACK + THE HONEST CLOSE

[This is the close. Before asking the inverse close question, stack value — long-horizon wins, integrity-reinforcing disclaimer, and the pre-frame against shopping around. Each beat compounds the math the customer just absorbed in Section 6. The honest close hands the deal to the customer with everything stacked in their face.]

Beat 1: The 25-year juxtaposition (fully scripted)

Compare the two paths over the long horizon. The flow: open with the ROI angle (lead with the investment frame), then walk the 15/25-year savings, then drop the blatant decision contrast. Lead with ROI because it primes the customer’s brain to see what’s coming as numbers about an investment, not numbers about a bill.

Open with the strictly-numbers frame and lead with ROI:

“If you want strictly the numbers, guys — that’s a [X]% ROI in your very first year. After 10 years it’s [X]%, and after 25 years your ROI is better than pretty much any investment you could make. It’s absolutely crazy — because it’s all guaranteed too.”

[Tonality: matter-of-fact + slight emphasis on “guaranteed.” Said as a quick aside, not a deep dive into investment theory. Keep it brief — if the customer wants to go deeper, let them ask.]

[The “guaranteed” tag is structurally critical. Most investments come with risk — stocks, property, crypto, business. Solar is one of the only consumer investments with a structural guarantee on the return (production guarantee + savings guarantee). That’s why it’s “better than pretty much any investment” — not because the raw % is higher than alternatives, but because the % is GUARANTEED. Don’t labour this point in the moment, but the rep should understand why it lands.]

Then walk the 15-year and 25-year savings:

“Over 15 years, you’d save \$[15-year savings] instead of spending \$[15-year cost]. So definitely a better option of those two.”

“Over 25 years, you’d end up spending \$[25-year cost] if you change nothing. Instead of that, you’d save \$[25-year savings]. It’s quite shocking. It almost doesn’t feel real saying it — it’s almost a \$[difference] difference after 25 years.”

[Tonality: confident + slight headshake. The “it almost doesn’t feel real saying it” line is the rep voicing the customer’s likely reaction — lands as honest acknowledgment of how big the math is.]

[Use whatever phrasing fits the actual figure: “almost a \$1 million difference” / “over a \$400,000 difference” / etc. Don’t commit to a specific number that may not match the customer’s actual data — let the calculator guide you.]

Then drop the blatant decision contrast:

“So look at it this way — right now you either make the decision to spend \$[X] on power over the next 15 years and keep paying way more after that point, ongoing forever. OR you make the decision to spend \$[Y] on solar over the next 15 years, and then pay nothing past that point. Pretty crazy, hey?”

[Tonality: matter-of-fact + slight emphasis on “keep paying way more after that point.” The “Pretty crazy, hey?” closer is delivered like a casual aside — almost rhetorical, just acknowledging out loud how absurd the contrast is. Don’t push for an answer; let it hang and move into the blackout callback.]

[Why “keep paying way more after that point” matters: the original framing only contrasted 15 years — but power bills don’t stop after 15 years. Adding the “ongoing forever” tag extends the contrast indefinitely, which makes the “pay nothing past that point” line on the solar side land much harder. The real choice isn’t 15 years vs 15 years — it’s 15 years of solar paying off forever versus an ever-rising bill that never ends.]

[Why “Pretty crazy, hey?” works better than “That’s the actual choice in front of you”: the latter is rep-driven framing — the rep telling the customer how to see it. The former is the rep voicing genuine bewilderment alongside the customer. Casual, conversational, lets the contrast speak for itself.]

[Why ROI-first works: leading with ROI primes the customer’s brain to evaluate solar as an investment with returns — not a cost they’re trying to minimise. Once they’re in “investment mode,” the savings walk lands as “here’s the dollar return on that ROI” rather than “here’s how much I’m being saved on bills.” The blatant decision contrast then funnels naturally because the customer is already mentally framing it as a yes/no investment decision rather than a cost negotiation.]

Beat 2: Blackout protection callback

Quick callback to the battery hardware section. Reinforces that the system is solving multiple problems at once, not just bills.

“You’re also protected from blackouts. We covered that earlier with the battery. So even when the grid goes down, your power stays on.”

[Tonality: matter-of-fact. Said as another fact stacking on top of the financial wins. Don’t labour it — the customer already saw the blackout protection in the battery hardware section. This is just a reminder.]

Beat 3: The summer profit reveal (bonus value stack)

Scroll back up to the production chart. Show the customer that during the high-production months, they’ll actually generate MORE than they use — and that excess goes back to the grid as feed-in credit. This is a bonus reveal that lands as “wait, you actually MAKE money some months?”

— Scroll up to the production chart on the calculator

— Point at the high-production months: “look at this — in [summer months], your production is way above your average usage”

— Walk the math: “your average daily usage is [X] kWh, but in these months you’re producing [Y] kWh per day. That extra [Y-X] kWh per day gets sold back to the grid”

— Frame the win: “we’ll always make sure you’re with the best energy provider. So during these months, you’ll most likely be in credit on your bill, making a bit of extra back”

— Optional: show a sample credit bill if you have one ready: “here’s an example of what a credit bill looks like — this is what some of our customers see in summer”

[Tonality: confident + slight enthusiasm on the credit reveal. The summer profit moment lands as a bonus the customer didn’t expect — which makes the deal feel even more weighted in their favour.]

[If you have a real credit bill screenshot, use it. Visual proof beats verbal claim. If you don’t, deliver the math verbally and move on — don’t fake a screenshot.]

Beat 4: After X years you pay nothing (long horizon win)

Quick add-on after the summer reveal. Once the loan is paid off, no more loan payments AND no more power bills. This is the long-horizon win that makes the deal feel inevitable.

“After [X] years when the green loan is paid off, you pay zero for the green loan, and you’ve got your fully paid-off system covering your power bill. Just want to make that clear.”

[Tonality: matter-of-fact. Said as another fact stacking on top of everything else. The “fully paid-off system covering your power bill” line is the long-horizon anchor — positions solar as solving the bill problem permanently. Note: avoid “you’re paying \$0 on electricity for the rest of the system’s life” framing — that overcommits to a number the rep can’t guarantee (small usage variations, future technology changes, etc.). The cleaner framing “you pay zero for the green loan and your system covers your bill” is honest about what we actually guarantee.]

Beat 5: The honest disclaimer (integrity beat)

Plant a self-aware honesty beat. The Savings Guarantee is based on the customer using approximately the same amount of power they currently use. If they triple it, that’s on them. The disclaimer protects the Savings Guarantee AND signals integrity right before the close.

“One thing I do want to preface here, guys — everything here is guaranteed based off you using the same amount of power that we built the system off. That’s your exact average from the past year — that’s what our technicians built everything off.”

“We’ve given you a buffer, obviously, but we can’t do anything if you come back tripling your usage — installing a theme park in the backyard, deciding you want to mine Bitcoin, something like that.”

[Tonality: matter-of-fact + slight chuckle on the joke examples. The framing treats them like adults who can handle the disclaimer. The absurd examples soften the directness with humour.]

[Keep the joke examples to 2–3 max — theme park in the backyard plus one or two more (mining Bitcoin, popping 10 more kids out, buying a fleet of EVs, etc.). Don’t labour the joke list. Pick whatever feels naturally absurd in the moment and move on.]

[Why this beat matters: by adding a small honest caveat right before the close, the rep signals integrity at the exact moment the customer is mentally evaluating “is this rep being straight with me?” The willingness to disclaim something the customer wouldn’t even ask about is what locks in trust.]

[The structural anchor of this beat is the technicians-built-on-your-average framing. By tying the guarantee to the technical work that’s already been done (sizing the system specifically off the past year of usage data), the disclaimer feels like genuine engineering reality rather than a sales caveat. The customer hears: “the system is calibrated to YOUR life — if you radically change YOUR life, the calibration breaks.”]

Beat 6: Total investment recap + transparency admission (fully scripted)

Jump back UP to the pricing breakdown on the calculator. After spending Beats 1–5 on long-horizon value, savings, and the honest disclaimer, scroll back up to the total investment to recap exactly what they’re getting and what discounts are applied. Then drop the “we’re not the cheapest” transparency admission — this is a callback to the “not dirt cheap” anchor planted in Pillar 3.

- Visual: scroll up the calculator to the pricing breakdown / total investment view
- Walk the recap: “just to clarify guys, this is your total investment, here are the rebates you’re using, here’s the case study discount applied, and here’s your final balance”
- Specifically call out the dollar amount of discount + the dollar amount of government rebates being used

Then drop the transparency admission:

“And guys, I’ll be transparent with you. Like I told you at the start, we’re not going to be the dirt cheapest in the world. You could go on Facebook, you could go elsewhere, find a system cheaper than this. I’m not going to be the one to try and tell you otherwise.”

“They’re just not going to have the guarantees, the warranties, the number one rated products, anything like that. That’s the trade-off.”

Then scroll back up to the savings/repayments view and re-anchor:

“But yeah guys — that’s what it looks like. Pretty simple, all you pay is \$[X].”

[Tonality: matter-of-fact + casual. Said like the rep is wrapping up the price discussion and grounding back to the simple final number. The visual move (scroll back up to the savings view) reinforces it — the customer’s eye lands on the monthly payment one more time before the next beat hits.]

[This re-anchor is the funnel into the baffles-me beat. The flow: transparency admission → re-anchor on the simple monthly figure → baffles-me lands as “and that’s why it baffles me when...” as a natural continuation. Without the re-anchor, the baffles-me beat lands abruptly. With it, the rep is walking the customer from price talk into pre-frame talk smoothly.]

[Tonality: matter-of-fact + slightly direct. Said like the rep is treating the customer as an adult who can handle the truth. The “like I told you at the start” is the explicit callback to Pillar 3 Slide 1, where the “we’re not dirt cheap” anchor was first planted — so this lands as a fulfilled callback, not a fresh admission.]

[Why this beat works structurally: admitting the cynical truth (cheaper exists, we know it does, you could find it) makes the rep feel honest at the exact moment the customer is about to evaluate the price. The trade-off framing (“cheaper exists, but here’s what they don’t give you”) handles the cheaper-competitor objection BEFORE the customer brings it up. By the time Beat 7 (Baffles-Me) lands, the customer has already heard the rep volunteer the cheaper option exists — which makes the “cheap = risk” argument feel like the rep’s genuine perspective, not a sales script.]

[Critical: this beat is doing three things at once — the visual recap of the discount, the verbal transparency admission, AND the re-anchor on the simple monthly figure. Don’t skip any of the three. Each one does discrete work.]

Beat 7: The research reframe (pre-handle against “I want to do more research”)

Pre-handle the “let me go do more research” objection by reframing what just happened. The customer just sat through 60 minutes of structural credibility work — that wasn’t a sales pitch, that was the research. The handle isn’t “our research is good” — it’s “you’ve literally just done the research with me.”

“This is exactly why we take you through everything in this much detail, guys. This is why we take you through a full presentation, to make sure to educate you, make sure you understand everything, and make sure to answer all your questions. We walk you through the products, the warranties, the guarantees, show you the math, design the system, explain the ROI.”

“The due diligence has been done for you. We’ve deeply researched and made sure everything’s right specifically for your situation — your property, your usage, your numbers. It’s built around exactly that.”

“That’s why by the time you get to the end of it, it’s actually very simple — because all the background work, all the research, all the extra stuff, has already been done for you.”

[Tonality: matter-of-fact + slight authority. Said like the rep is reframing what just happened — not selling. The customer should hear: “ah, that wasn’t a sales pitch — that WAS the research.” Use whatever natural transition fits your delivery rhythm into this beat.]

[Delivery alternative: this beat can also be bounced off a customer question if one comes up during the any-other-questions check-in. Answer their question fully, then funnel from your answer into the reframe. The bounced version often lands harder because it arrives as a natural follow-on to a real customer concern, not as a standalone scripted move. Either way works — if no question comes up, deliver it as a standalone beat right here.]

[The structural spine of this beat is the line “the due diligence has been done for you.” Every other element supports that one claim. The customer doesn’t need to research because the rep ALREADY DID THE RESEARCH on their behalf — same way you’d hire an accountant to do due diligence on a property purchase. The customer didn’t do the work because someone qualified already did it for them.]

[Why the “your property, your usage, your numbers” specifics matter: the three concrete callbacks ground the abstract due-diligence claim back to THEIR life. Without those specifics, “due diligence” sounds generic. With them, it lands as “we did this work specifically for YOU.”]

[Why this beat matters: the “I want to do more research” objection is the most common post-appointment delay. It’s rarely about needing actual information — it’s about the customer wanting time to feel certain. By naming the 60 minutes as the research itself, the rep removes the customer’s mental escape route. They can’t go research what they’ve already researched. The objection deflates before it forms.]

[Critical: this beat lands as a structural reframe, not as a defensive move. If the rep delivers it like “you don’t need to do research because we already did” (defensive), it triggers the objection. If the rep delivers it like “here’s what we just did together” (descriptive), it pre-handles it.]

Beat 8: The baffles-me pre-frame (against shopping around)

Pre-frame against the “let me get other quotes” instinct. This beat protects against post-appointment shopping by planting doubt about average competitors WITHOUT accusing the customer of being someone who would do that. Critical tonality — this lands soft, not heavy.

“That’s why I always say it literally baffles me — when the numbers look as good as this, when you can pay less than what you already pay on power, why anyone would risk it with one of those average companies. Like any company that doesn’t guarantee anything, got no way to protect you, no third-party insurance.”

“It’s crazy to me how some people just settle for rolling the dice and gambling when it comes to something this important.”

“Obviously I’m not saying you guys would do that — I know you’re well informed. I just say that because honestly it confuses me when the math is this clear.”

[Tonality: matter-of-fact + slight headshake on the baffling part. Said like genuine bewilderment at other people’s decisions — NOT like an accusation toward the customer. The follow-up “obviously not saying you guys would” is critical — without it, the customer feels accused. Use whatever natural transition fits your delivery rhythm into this beat.]

[CRITICAL: never deliver this without the explicit “I’m not saying you guys would do that” tag. Without that softener, this line reads as the rep boxing the customer in — which kills the close. WITH the softener, it lands as the rep trusting the customer to be informed.]

[Why this beat matters: solar customers almost universally feel the urge to “get other quotes” before signing. This pre-frame plants doubt about average competitors before they even leave the appointment, making post-appointment shopping feel risky.]

Beat 9: The “spike the bill” reframe (customer-side aha)

Voice the customer’s emerging realisation back to them. This beat puts words to the aha they’re probably already having — that they don’t have to be locked into power companies that don’t care about them.

“This is the moment people have that aha. They go, oh wait, this is what you actually mean — I can pay less than what I already pay, I don’t have to be locked into the power companies who clearly don’t care about me, they just want to make more money and they’re going to spike the bill every year — and I’ve got a way to not have to deal with them anymore.”

[Tonality: confident + slight knowing energy. Said like the rep is voicing what most customers think when they finally understand the math. The phrasing “this is the moment people have that aha” positions the customer’s realisation as universal — everyone hits this point. Use whatever natural transition fits your delivery rhythm into this beat.]

[Why this beat matters: by voicing the customer’s likely internal realisation BEFORE they say it themselves, the rep validates the realisation without forcing it. This makes the customer feel understood rather than sold to. The closing tag “and I’ve got a way to not have to deal with them anymore” positions solar as the escape from the relationship the customer already resents.]

Beat 10: Any other questions check-in (fully scripted)

Before the close, give them space to surface any remaining questions. This is genuine — the rep wants to clarify anything that’s still unclear before asking the close question. Customers who feel rushed into the close push back. Customers who feel heard close themselves.

“By the way guys, before we keep going — do you have any other questions? I just want to make sure I clarify everything for you.”

[Tonality: genuine + casual. Asked like the rep actually wants to know, not as a closing technique. If they ask questions, answer them fully. If they have follow-up questions after that, answer those too. Don’t rush this beat — the time you spend here pays back in the close.]

[If they say “no, no other questions” or some version of all clear, move into Beat 11 (the honest close). Don’t skip ahead until they explicitly confirm they’re clear.]

Beat 11: The honest close (fully scripted)

The inverse close. Don't ask "are you ready to move forward?" — ask "is there any reason this doesn't work?" The customer almost can't articulate one because the math is so overwhelmingly in their favour. The alliance signal goes at the END, not the start — lands more casual that way.

"Alright guys, looking at these numbers, do you see any sort of way that this doesn't benefit your current scenario? You can be honest, I prefer you to be honest with me — I'm here to help."

[Tonality: casual but meticulous. This is one of the hardest tonalities in the entire course to nail. The line has to be delivered with a relaxed, "take it or leave it" energy — while the math has just made it overwhelmingly obvious that it DOES benefit them. The contrast between casual delivery and obvious answer is what makes the close land. Said too pushy, it reads as a closing technique. Said too flatly, it reads as disinterest. The sweet spot is genuinely chill curiosity.]

[The alliance signal goes at the END ("you can be honest, I prefer you to be honest with me, I'm here to help") rather than the start. Putting it first telegraphs the close. Putting it after the question lets the question land naturally, then the alliance signal softens it. Casual energy on the closing tag — almost an afterthought.]

[Customers almost universally either say "no, it makes sense" or raise a small objection that's easy to handle. If they say "makes sense" — move to Beat 13 (the closing structure). If they raise a real objection — address it specifically and re-anchor to the math. If they sidestep / deflect / answer something else — use Beat 12 (sidestep recovery).]

Beat 12: Sidestep recovery (if they don't answer directly)

If the customer doesn't actually answer the close question. Sometimes they'll deflect — ask another question, change the subject, give a non-answer. Address whatever they said, then loop back to the close with a sharper version of the question.

— First: answer whatever they actually said. Don't skip past their question or it reads as pushy

— Then: re-ask the close, but with sharper phrasing

"Alright guys, honestly — do you see any way this isn't a sensible investment, or you'd wake up a couple of days from now thinking 'oh, that was a horrible decision we made'?"

[Tonality: genuine + slightly more pointed than Beat 11. The "wake up a couple of days from now" framing is the structural shift — it forces the customer to think about regret, not present feelings. If they can't articulate a future regret, they have no real reason to delay.]

[Why this beat exists: customers who sidestep are often hesitating without knowing why. The future-regret framing surfaces the real concern (or proves there isn't one). Both outcomes move the close forward.]

[Once they give alignment after the sidestep recovery, move to Beat 13 (the closing structure). If they sidestep this one too, you're probably looking at a real objection that needs to be unpacked — ask "what's the hesitation?" directly and handle whatever surfaces.]

Beat 13: The closing structure (fully scripted)

Once they give honest-close confirmation, transition straight into the closing structure. No separate "you guys happy with that?" check first — the honest close was the verbal yes. This is the bridge from yes to actual order form. Don't pause — the moment you hear the confirmation, start moving them into action.

The opening transition (fully scripted):

“Well that’s pretty much it, guys. Basically what happens from here is we need to reserve the batteries from the warehouse. As mentioned, there’s only [X] left.”

“So the most important thing for us to do now is to complete the order form so we can set them aside for your property.”

[Tonality: matter-of-fact + slight forward energy. Said like the next logical step in a process — not like a closing technique. The customer just confirmed; this is what happens next.]

[Note: this version reserves BATTERIES because the case study is built specifically around the battery offer. Sub in whatever item your case study mechanism is built around — if it’s a panel reservation, reserve panels. If it’s an inverter case study, reserve inverters. The structural function (limited stock + reservation as the action step) transfers regardless.]

If FINANCE — two options:

— Standard version:

“Just to let you know, everything would be conditional to getting finance approval — which shouldn’t be an issue if you have a good credit rating with no defaults.”

— Joke version (lands a laugh, breaks tension):

“Just to let you know, everything would be conditional to getting finance approval — which shouldn’t be an issue as long as you guys don’t have a criminal record or hiding anything behind the scenes you haven’t told me about. Or anything you haven’t told [partner’s name] about.”

[Tonality on the joke version: light + cheeky. Said like a friend ribbing them — not like a rep being clever. The customers will laugh and reassure (“no no, nothing like that”) which lands as a yes-momentum moment right before the final close. Use the partner version if you’ve been talking to a couple — addressing one partner about the other amplifies the joke.]

[Why the joke works: the entire pillar has been heavy — lots of math, lots of money, lots of structural pressure. By the closing structure, the customer is mentally tired and emotionally invested. A small laugh at this exact moment releases tension AND signals the rep is comfortable enough with the situation to crack a joke — which itself signals confidence in the deal. Use the joke version if the room is light enough to take it. Standard version if the customers are reserved.]

If CASH — two variants depending on company policy:

— No deposit required (case study version):

“As we’re placing you under the case study, we are not going to grab a deposit off you. You simply make the payment post installation once you’re 100% satisfied with everything!”

— Deposit required version:

“We just need a \$[X] deposit so we can reserve everything and lock in your batteries from the warehouse. The remainder is paid post installation once you’re 100% satisfied with everything.”

[Use whichever cash structure your company actually runs. The no-deposit case study version is the strongest because it positions the case study itself as the reason for waived deposit — another structural benefit the customer is getting. The deposit version is fine if that’s your operational reality — just be honest about which one applies.]

The final close (fully scripted):

“So that’s pretty much it, guys — you happy with that?”

[Tonality: casual + light. Said like a normal conversational check — not a high-stakes close. The casualness is what makes it land. If they confirm, you're moving into Pillar 11 (the actual order form / finance application).]

[This is the final verbal yes before signing. Once they confirm here, every move from this point onwards is mechanical — pulling up the order form, walking the finance application, locking the batteries. No more selling. The selling is done.]

Beat 14: The confirmation + transition into Pillar 11

"Perfect."

[Tonality: calm + confident. One word, then move directly into Pillar 11. Don't over-celebrate — the calm acceptance signals this is a normal next step, not a victory moment.]

FAILURE MODES (DO NOT DO)

- **Skipping the pre-frame anchor (Section 1).** Without the explicit callback to the Pillar 9 hint ("this is sort of what I've been alluding to"), the case study reveal lands as a sales gimmick instead of a fulfilled promise. The connection IS the credibility.
- **Forcing qualifying criteria that don't fit the property.** If the customer's property obviously doesn't match a criterion you mention, credibility collapses immediately. Drop criteria that don't fit — emphasise the ones that do.
- **Skipping the honest admission — OR forcing a fake one.** The honest admission moment is what makes the qualifying criteria feel believable. But it MUST be true for the customer's actual property — if you force a generic line that doesn't fit their home, it reads as more manufactured than skipping the beat entirely. If you can't see anything genuinely notable about the property, drop the beat.
- **Manager call without a real condition tied to it.** If the manager call isn't framed as needing clarification on a real condition (the photos), it reads as pure theatre. The condition is what makes the call feel real.
- **Coming back from the mute too quickly.** 30 seconds reads as fake. 4+ minutes risks customer disengagement. 2–3 minutes is the sweet spot. Use the time to actually finalise the math.
- **Vague scarcity numbers.** "A few systems" reads as manufactured. "100kW allocated, 11 modules left" reads as real. Specific numbers (even if they're flexible) make the scarcity land.
- **Rushing the battery sizing math.** If you skip the step-by-step math walk, the customer can't follow why the discount makes the deal work. The math IS the proof — rushing it leaves the close feeling unsupported.
- **Skipping the "we can never quote 100%" honesty beat.** Quoting 100% battery coverage would be both dishonest AND violate the Savings Guarantee. The honest 80% framing is what protects the guarantee structurally and makes everything else feel real.
- **Hyping the aha reveal.** The math speaks for itself. Hype ("isn't that AMAZING?") tells the customer the rep needs them to be impressed — which makes them suspicious. Calm delivery + slight pause is what makes it land.
- **Failing to handle the "what if my bill changes" question.** Almost every customer asks this. If you don't anchor back to usage (not rate), the financial argument has a hole in it that lingers

post-appointment.

— **Asking “are you ready to move forward” instead of the honest close.** Direct closes feel like sales pressure at this stage. The inverse close (“is there any reason this doesn’t work?”) lets the customer find no reason — and that’s the close.

— **Over-celebrating the yes.** Excited “awesome let’s do this!” energy tells the customer they just made a sales rep’s month — which makes them second-guess. Calm “perfect” signals it’s a normal next step.

TRANSITION INTO PILLAR 11

Pillar 10 closes with the customer saying yes to “you guys happy with that?” and the rep replying with a calm “perfect”. The mental commitment is locked — the customer has effectively said yes to the deal. Pillar 11 is the lightweight final close: walking them through the actual finance application, helping them complete it, and locking in the deal. No additional verbal switch needed — the “perfect” IS the transition.

[The heavy structural work is done. Pillar 11 is about converting the verbal yes into a signed application without losing momentum. Speed and assumptive flow are critical — any pause or hesitation between Pillar 10 close and Pillar 11 application is where deals die.]

REMEMBER: THIS IS THE CLOSE. EVERY OTHER PILLAR WAS A BUILD. WALK THE MATH SLOWLY, BE HONEST AS A METHOD, LET THE CONTRAST DO THE WORK — THEN HAND THEM THE DEAL. THE INVERSE CLOSE FINDS NO REASON NOT TO.
